

**"VACUUM VAPORIZATION UNIT FOR THE METAL COATING OF A STRIP  
SUBSTRATE AND CORRESPONDING VAPORIZATION SOURCE"**

**ABSTRACT**

The equipment comprises: a plurality of vaporization sources (31)  
5 which are heated and fed with a metal which is liquefied and vaporized by  
said sources; and means for feeding the substrate (N) above the sources.  
Each source has two cavities (41A, 41B) which are aligned along the direction  
in which the substrate is fed, and each of said two cavities is fed by a  
corresponding metal wire delivered by corresponding delivery means (51, 53).
